DETAILED ACTION

Allowable Subject Matter

1. Claims 13-27 and 34-47 allowed.
2. Claims 51 and 52 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 50 rejected under 35 U.S.C. 103(a) as being unpatentable over Shaw et al. (5,610,335) in view of Shaw et al. (5,847,454).

Regarding Claims 50, Shaw et al. '335 disclose a microelectromechanical lateral accelerometer where in Fig. 17, cantilever type beam 380 is disposed inside trench 410 with insulating layer 403, and conductive plates 404 and 406. Beam is connected to substrate 390 on one portion with connector 396. The second portion of the beam is spaced apart from the walls of the trench 411. Shaw et al. '335 fail to specifically disclose that one portion of the beam is movable and the other portion is fixed/attached/connected to the substrate and the detection structure. However, Shaw et al. '454 disclose electrically-isolated released microstructures where in Claim 1, Shaw et

al. disclose a beam with one portion interconnected and one portion movable.

Furthermore, claim 23 of Shaw et al. '454 discloses the detection structure.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required movable and connected portions of the cantilever beam and the required detection structure in Shaw et al. '335 as taught by Shaw et al. '454, in order to have a semiconductor device with more functionality.
